PROFILE

Software Engineering graduate (BSc Hons, Upper Second Class) with one year of industry experience at NetOne Cellular, where I configured, tested and troubleshot systems in a live, high-availability telecom environment. I build complete, working products: responsive websites, the systems behind them, and AI applications, including a deep learning system that predicts blood groups from fingerprints. I learn fast, take ownership of my work, and am seeking a Graduate Trainee or junior role in software development, systems or IT.

TECHNICAL SKILLS

Programming	Python, JavaScript, PHP, SQL, Node.js, HTML, CSS
Web development	Responsive, mobile-first websites; Flask web apps; cPanel hosting, domains and DNS
AI & data	PyTorch, deep learning, image classification, Power BI, ETL and reporting
Testing & support	User Acceptance Testing (UAT), API testing (SoapUI), system monitoring, troubleshooting, issue logging
Systems	Billing systems, USSD Gateway, Service Delivery Platform (SDP), TCP/IP networking fundamentals
Engineering practice	SDLC, system and database design, Agile, UML, Git and GitHub Actions
Professional	Requirements gathering, technical documentation, project coordination, ISO 27001 security fundamentals

EXPERIENCE

Software Development Intern — NetOne Cellular Limited, Harare

Industrial attachment · 1 year

System configuration, testing and deployment

- Configured and tested USSD and SMS-based services before go-live
- Monitored and validated services on the Service Delivery Platform (SDP) in a production environment
- Took part in deploying and testing new telecom digital services
- Carried out User Acceptance Testing (UAT) on new and upgraded systems; logged defects and retested fixes

Troubleshooting and system support

- Diagnosed and troubleshot system faults, following each issue through to resolution
- Supported prepaid and postpaid billing systems, reconciled accounts and resolved discrepancies

Requirements, documentation and projects

- Gathered user requirements and documented system workflows
- Coordinated the USSD Gateway and SDP upgrade projects across cross-functional technical teams
- Prepared progress reports, meeting minutes and technical documentation

PROJECTS

- **Fingerprint Blood Group Detection (final-year project)** — Biometric deep learning system: a PyTorch CNN classifies fingerprint images into 8 blood groups, served through a Flask web app and API for hospital staff.
- **Websites, domains and hosting** — Designed and built my portfolio and services websites in HTML, CSS and JavaScript; registered a .co.zw domain, configured DNS nameservers and managed cPanel hosting with a separate subdomain.
- **Document and slides automation** — Node.js and Python scripts that generate fully formatted documents and edit presentation slides automatically.

EDUCATION

BSc (Hons) Software Engineering — Upper Second Class (2:1)
Bindura University of Science Education

ZIMSEC Advanced Level — Hartzell High School · Biology, Pure Mathematics, Chemistry

ZIMSEC Ordinary Level — Hartzell High School · 12 subjects, including Mathematics (A), Combined Science (A), Physics (B)

CERTIFICATES — LINKEDIN LEARNING

- ISO 27001:2022 Cybersecurity
- API Test Automation with SoapUI
- Practical GitHub Actions
- Python Essential Training
- Power BI for Data Analysts
- Project Management Foundations
- Problem-Solving Techniques
- What Is Generative AI?
- CSS Essential Training
